

COCCI PHYT

For veterinary use only
Against Coccidiosis & Gut Health Enhancer
For Feed production only

Composition

Quercus infectoria, Artemisia annua and Allium sativum

Mechanism of action

Cocci Phyt is a Nature friendly product containing natural herbs include Oak Gall, Artemisia and Garlic. It acts as a potent Eimeria spp inhibitors and therefore benefits the animal by improving the gut environment. Tannins in the Oak Gall inhibit the life cycle of coccidia by decreasing the sporulation of the oocyste of Eimeria spp. Artemisinin in Artemisia has anticoccidial action by inhibiting sporulation and cell wall formation in Eimeria species through inducing oxidative stress. Garlic and its sulfur compounds like allicin, inhibit the parasite life cycle and also possess broad antimicrobial activities which can eliminate negative effects of microbial infections.

Indications

- Help to prevent coccidiosis
- Inhibit the growth and reproduction of Eimeria parasites
- Inhibit sporulation of the oocyste of Eimeria
- Improves immunity
- Improve uniformity in livestock
- Improve growth rate
- Improve feed efficiency
- Improve intestinal environment & digestive function

Dosage

0.5-1 kg / Ton of feed (0.1 g/kg of body weight)

Stability: Cocci Phyt is stable in premixes, concentrates as well as mash, pelleted or expanded feed.

Drug Interactions/Compatibility: There is no drug interaction and Cocci Phyt is Compatible with other commonly used feed additives.

Withdrawal period: There is no withdrawal time for the product.

Packaging: 10 & 25 kg Packets

Storage condition: Keep in dry place at 25 °C, away from direct sunlight and in closed packets.

Expiry date: 2 years from production date
