

Sana Vera

100% Natural Skin Wound Healing Spray

Suitable for Pet

Topical spray

Ingredients:

- Calendula officinalis Extract
- Aloe vera Extract
- Propolis Extract

The skin of dogs and cats makes up 10-15% of their body weight and its health has an important effect on the general health of the animal. The skin acts as a barrier against various pathogenic microorganisms such as bacteria and fungi, and if this organ is damaged, various infections and diseases can occur.

Mechanism of action:

Sana Vera is a 100% natural spray that heals all kinds of wounds and skin inflammations in pets and companion birds. The main ingredients of this product include extracts of Calendula, Aloe vera and Propolis. These compounds have broad anti-inflammatory, antibacterial, antifungal, and antioxidant properties, and by enhancing the immune system, stimulating collagen synthesis and increasing epithelialization, wound contraction, and forming granulation tissue, they speed up the wound healing process.

Due to the presence of antioxidant elements such as flavonoids and polyphenols in the Calendula, it reduces GST, SOD and CAT and significantly improves the oxidative stress caused by *Sarcoptes scabiei*.

Also, Calendula extract heals wounds and tissues by creating minimal scars in large infected wounds and burns.

By increasing the production of red blood cells and the penetration of white blood cells, aloe vera inhibits the growth of pathogenic bacteria and prevents infections such as pyoderma caused by staphylococcus. Propolis regenerates the skin in the wound area by secreting fibroblast growth factors (PGF2).

Sana Vera does not contain any toxicity and its formulation does not contain any synthetic chemicals, preservatives or antibiotics. Therefore, it can be used in sensitive conditions like pregnancy, milking, newborns and young animals, and even weak physical conditions.

Sana Vera Indications:

- Open wounds and skin burns
 - Preventing contamination, reducing pain, preventing scar formation and reducing wound bleeding
 - Faster healing of wounds caused by accidents and abscesses compared to chemical compounds
 - Lesions caused by insect bites
